TIMOTHY VICTOR OSAS

Cybersecurity Analyst | Ethical Hacker | Digital Forensics Specialist

Email | +234 9030694949 | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Detail-oriented Cybersecurity Analyst with hands-on experience in penetration testing, vulnerability analysis, network security, and digital forensics. Certified by Google and recognized industry bodies with a strong foundation in threat detection, incident response, and SIEM operations. Skilled in Python and Bash scripting to automate security workflows, leveraging IT automation and configuration management expertise gained through the Google IT Automation with Python certification. Adept at designing secure network architectures, conducting ethical hacking assessments, and applying forensic investigation techniques to protect critical assets. Committed to delivering proactive, intelligence-driven security solutions that reduce organizational risk and ensure operational resilience.

SKILLS SUMMARY

- **Offensive Security:** Penetration Testing, Ethical Hacking, Red Teaming, Vulnerability Analysis, Exploit Development, Privilege Escalation, Enumeration.
- **Defensive Security:** SIEM Tools, IDS/IPS, Firewall Management, Incident Response, Threat Intelligence
- **Digital Forensics:** Traffic Analysis (Wireshark, Burp Suite), Evidence Collection, Log Analysis.
- **Network Security:** VLAN Configuration, ACL Implementation, Firewall Policies, TCP/IP, Network Architecture Design.
- **Programming & Scripting:** Python, Bash, SQL, Linux CLI, Git, GitHub, IT Automation
- **Tools & Platforms:** Kali Linux, Wireshark, Burp Suite, Nmap, Metasploit, Gobuster, PowerShell, Windows Server, Linux Administration.
- **Soft Skills:** Team Leadership, Analytical Problem-Solving, Technical Documentation & Reporting, Adaptability.

CERTIFICATIONS

Google IT Automation with Python Professional Certificate 2026

Google / Coursera

- Mastered Python programming for automating system administration tasks including file management, OS process control, and Bash scripting.
- Applied Git and GitHub for version control, code review, and collaborative software development workflows.
- Developed troubleshooting and debugging skills to identify root causes of system crashes, performance issues, and resource exhaustion.
- Implemented configuration management and cloud-based infrastructure automation using Puppet, enabling scalable and repeatable IT deployments.

Jr Penetration Tester 2025

TryHackMe — Intermediate

- Performed enumeration techniques to discover hosts, open ports, services, and vulnerabilities across simulated target environments using industry-standard tools such as Nmap, Gobuster, and Metasploit.
- Executed realistic hands-on exploitation exercises against deliberately vulnerable machines, practising privilege escalation, credential harvesting, lateral movement, and persistence techniques in controlled lab environments.
- Applied Linux command-line skills extensively across all labs, reinforcing system navigation, file permissions, process management, and scripting for offensive security tasks.
- Produced structured penetration test reports documenting findings, risk ratings, evidence, and actionable remediation recommendations in line with industry reporting standards.

Google Professional Cybersecurity Certificate 2024

Google / Coursera

- Covered foundations of cybersecurity, network security, Linux and SQL for security operations, asset protection, and threat detection and response.
- Gained practical experience with SIEM tools, IDS platforms, and incident response playbooks aligned to the NIST framework.
- Applied Python scripting to automate cybersecurity tasks including log parsing, alert triage, and security reporting.

Cybersecurity and Digital Forensics 2024

Cyber Secured India

- Trained in evidence acquisition, chain of custody management, network traffic analysis, and formal forensic investigation procedures.
- Developed competency in analyzing digital artefacts from compromised systems and producing court-admissible forensic reports.

CYBERSECURITY PROJECTS

Securing the Access Grid — Cybershield Corp

- Designed and implemented a comprehensive access control framework for a simulated enterprise environment, enforcing least-privilege policies across all user accounts and network segments.
- Identified privilege escalation vectors and applied role-based access controls (RBAC) to eliminate unauthorized lateral movement paths.
- Produced a post-assessment remediation report with prioritized risk findings and corrective action plans.

Incident Response — Advanced Phishing Attack | Eurotrans Logistics

- Simulated end-to-end incident response for a targeted spear-phishing campaign, performing email header analysis and malicious IoC identification.
- Contained the threat, eradicated compromised artefacts, and restored affected systems in line with the NIST incident response framework.
- Delivered a detailed post-incident report with root cause analysis, timeline reconstruction, and preventive recommendations.

Python-Based Website Monitoring & Anomaly Detection Tool

- Developed an automated uptime and anomaly detection tool in Python that continuously monitors web assets and generates real-time alerts on unexpected behavior.
- Integrated log management features to record events for forensic review and post-incident analysis, applying skills from the Google IT Automation with Python certification.
- Maintained full project history using Git, enabling version tracking, rollback capabilities, and collaborative code review.

EDUCATION

Nigeria Maritime University, Okerenkoko, Delta State 2024

Bachelor of Engineering (B.Eng.) — Marine Engineering **First Class Honors | CGPA: 4.51 / 5.0**
