PROFESSIONAL SUMMARY

Security engineer and AI full-stack engineer with hands-on experience in API penetration testing, large language model fine-tuning and production web platforms. Has led several authorised penetration tests to OWASP standards; recent API assessments alone reported 54 findings across more than 780 API routes and operations. Built a hosted LLM fine-tuning platform as sole developer and deploys a CRM and delivery platform running in production on Microsoft Azure. B.Eng. (First Class Honours).

PROFESSIONAL EXPERIENCE

Security Engineer, AI Research (LLMs) and AI Full-Stack Engineer

CrowtherLabs-THCO · Full-time

Jun 2026 – Present

Lagos, Nigeria (Hybrid)

- Lead authorised penetration tests of client web platforms and APIs to the OWASP API Security Top 10, PTES and CVSS v3.1, from scoping and rules of engagement through to reporting and retest. Recent engagements include:
- Led an authorised black-box penetration test of a multi-tenant HR and payroll SaaS API: 292 routes, 1,001 test cases and 40 findings (11 critical, 5 high, 16 medium, 8 low), scored with CVSS v3.1 and mapped to CWE.
- Traced 20 of those 40 findings to a single authentication root cause, allowing one fix to close half of the report.
- Led an API assessment of a fintech platform with KYC and payment flows: 496 operations over 20 test runs and 14 findings (6 high, 4 medium, 1 low, 3 informational); two findings remediated and verified by retest during the engagement.
- Delivered final reports, findings trackers and prioritised remediation plans to engineering teams for both engagements.
- Designed and built AtomStudio, a hosted LLM fine-tuning platform, as sole developer (269 commits).
- Developed and deployed the company CRM and delivery platform (140+ commits), adding recruitment, delivery pipeline and HR modules, server-side role-based access control and a CI/CD pipeline to Azure Container Apps.

Conversion Engineer (CNG Systems)

Funtay Group · Full-time

Sep 2024 – May 2026

On-site

- Configured and calibrated CNG injection ECUs with AEB2001N interface software for each vehicle conversion.
- Diagnosed and resolved faults in conversion systems using software diagnostics and live sensor data.
- Led a team of technicians on vehicle conversions, setting procedures and checking quality before handover.
- Ran safety and compliance checks and kept technical records for every conversion.

SELECTED PROJECTS

AtomStudio – Hosted LLM Fine-Tuning Platform

2026

- Lets teams upload their own data, receive a price quote before starting, and train LoRA / QLoRA adapters or full fine-tunes on GPUs rented by the minute, with adapter, merged and GGUF exports.
- Validates datasets before any spend, streams live loss and GPU telemetry, and serves base and fine-tuned models side by side for evaluation.
- Rents GPUs within a price ceiling, sizes disks from model files and releases idle machines within seconds to control cost; includes workspace isolation, API keys, spend limits and an MCP server for AI agents.

Technologies: Python, FastAPI, React, Unsloth, Hugging Face, Vast.ai, Docker, PostgreSQL, MCP

CRM and Delivery Platform – CrowtherLabs-THCO2026

- Single system for client relationships, a 17-stage delivery pipeline with approval gates, a control tower, kanban task boards, recruitment (CV parsing and candidate de-duplication) and HR.
- Removed secrets from source control and moved heavy pages onto index-backed queries to improve security and speed.

Technologies: React, Tailwind CSS, FastAPI, MongoDB / Azure Cosmos DB, Azure Container Apps, GitHub Actions

Earlier Security Projects2024 – 2025

- **Securing the Access Grid:** designed a least-privilege access control framework with RBAC for a simulated enterprise and delivered a prioritised remediation report.
- **Phishing Incident Response:** handled a simulated spear-phishing incident end to end under the NIST framework, from IoC identification to recovery and root-cause report.
- **Website Monitoring and Anomaly Detection Tool:** built a Python tool for uptime and anomaly alerts with forensic logging.

TECHNICAL SKILLS

Security	API penetration testing, authorisation and tenant-isolation testing, OWASP API Security Top 10, OWASP WSTG, PTES, CVSS v3.1, threat modelling, security reporting
AI and LLMs	LLM fine-tuning (LoRA, QLoRA, full), Unsloth, Hugging Face, dataset preparation, model evaluation, Model Context Protocol (MCP)
Software	Python, FastAPI, Flask, React, JavaScript, SQL, MongoDB, PostgreSQL, Bash, REST APIs
Cloud and DevOps	Microsoft Azure (Container Apps, Cosmos DB), Docker, GitHub Actions, Linux, Git
Tools	Burp Suite, Postman, Nmap, Metasploit, Gobuster, Wireshark, OpenVAS, Kali Linux, SIEM

CERTIFICATIONS

Google IT Automation with Python Professional Certificate – Google / Coursera	2026
Jr Penetration Tester – TryHackMe	2025
Cybersecurity Programme – 3MTT Nigeria / Darey.io	2025
Google Cybersecurity Professional Certificate – Google / Coursera	2024
Cybersecurity and Digital Forensics – Cyber Secured India	2024
Cybersecurity Course – TECH4DEV	2024

EDUCATION

Bachelor of Engineering (B.Eng.), Marine Engineering – First Class Honours	2019 – 2024
Nigeria Maritime University, Okerenkoko, Delta State, Nigeria	CGPA 4.51 / 5.00
Project: Ocean Thermal Energy Conversion (OTEC)
